

Takeovers Chief of Staff — Data Flow Diagram

Document 12 of 13 · Four primary data flows showing system in motion

FLOW 1 — VOICE CAPTURE TO TEAM DISPATCH

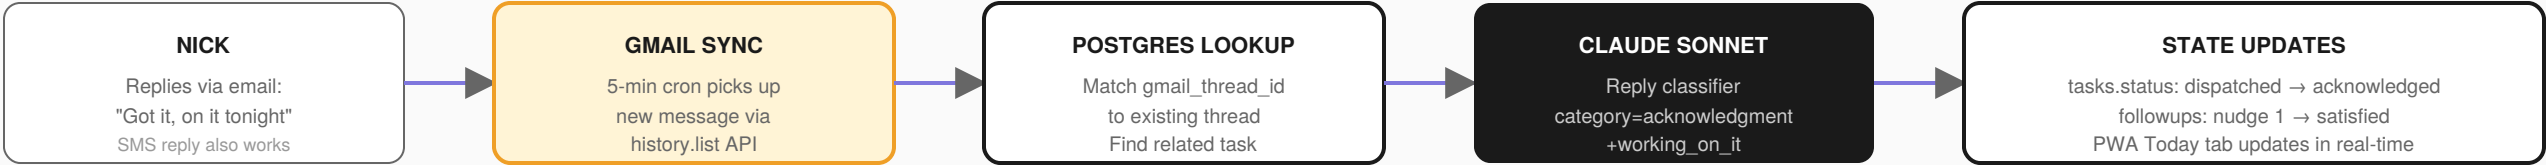

Selmen brain-dumps a task. Agent dispatches to the right team member, in their style, on the right channel.

Total time from Selmen's voice memo to Nick's email: ~10-15 seconds

FLOW 2 — INBOUND TEAM REPLY TO STATUS UPDATE

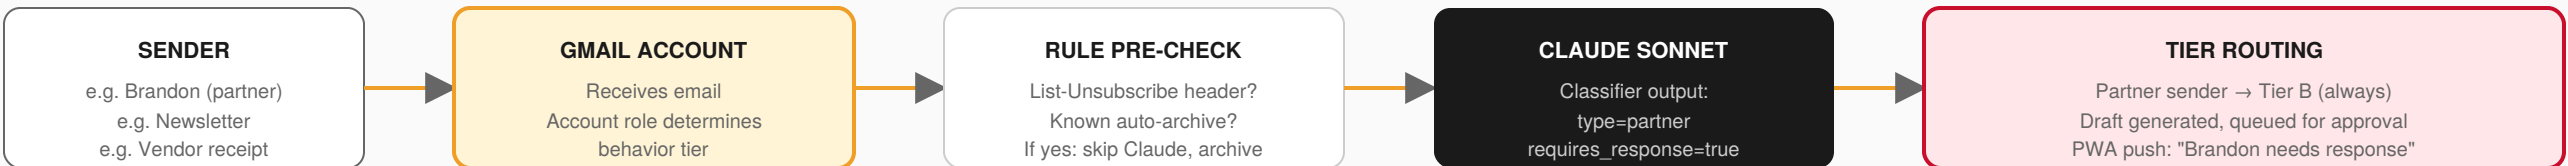

Team member replies. Agent classifies, updates task status, satisfies pending follow-ups, optionally auto-replies.

Total cycle time: ~5-10 minutes (limited by Gmail sync interval; sub-second once message arrives)

FLOW 3 — INBOUND EMAIL CLASSIFICATION AND TIER ROUTING

Email arrives at one of three accounts. Different account = different rules. Claude classifies. Action taken or draft queued.

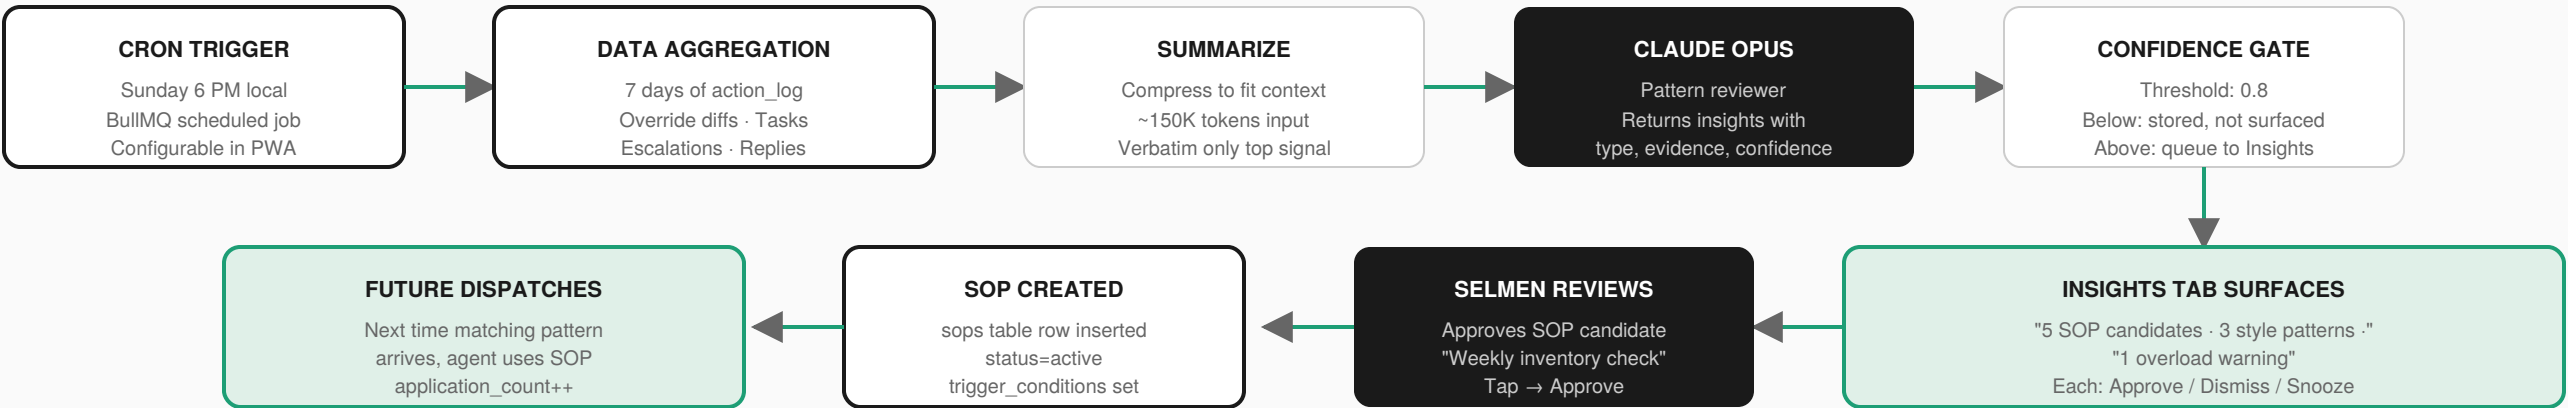

PER-ACCOUNT BEHAVIOR DIFFERENCES

ACCOUNT	PRIMARY ROLE	AUTO-HANDLED	DRAFTED	SAFETY
sel@takeovers...	Team + partner correspondence	Internal acks · Receipts · News	Partners · Long replies · Money	Tier toggleable
selmen@your...	Account hub: ads, billing, receipts	Aggressive auto-archive · Forward	Almost nothing — surfaces alerts	High-volume, low-reply
soselman@gmail	Personal — sensitive	Newsletter/receipt only	Everything else (default Tier B)	FLAG LOCKED OFF

Personal account: agent NEVER auto-sends regardless of confidence. Server-side enforcement, not just config.

FLOW 4 — WEEKLY INSIGHTS RUN (PHASE 6 LEARNING)

Sunday 6 PM. Aggregate week's data, run Opus pattern detection, generate insights, surface in Insights tab.

Total run time: ~30-90 seconds. Cost: \$1-5 per weekly run. Compounds value over time.

DATA STORAGE PROFILE

Estimated annual data volume per user (Selmen)

Postgres tables

~50K messages, ~5K tasks, ~150 projects, ~200 SOPs, ~1M action_log entries · Total ~3-5 GB after 12 months

S3 storage

~5K voice memos × 30s × 50 KB/s WebM = ~7 GB voice + ~1 GB email attachments cached = ~10 GB total

Cost

Postgres: free tier or ~\$10/mo · S3: ~\$0.50/mo · Backups to S3: ~\$1/mo · Total infrastructure: under \$50/mo all-in

See Document 11 for full system architecture · Document 13 for agent decision tree
