

Takeovers Chief of Staff — Agent Decision Tree

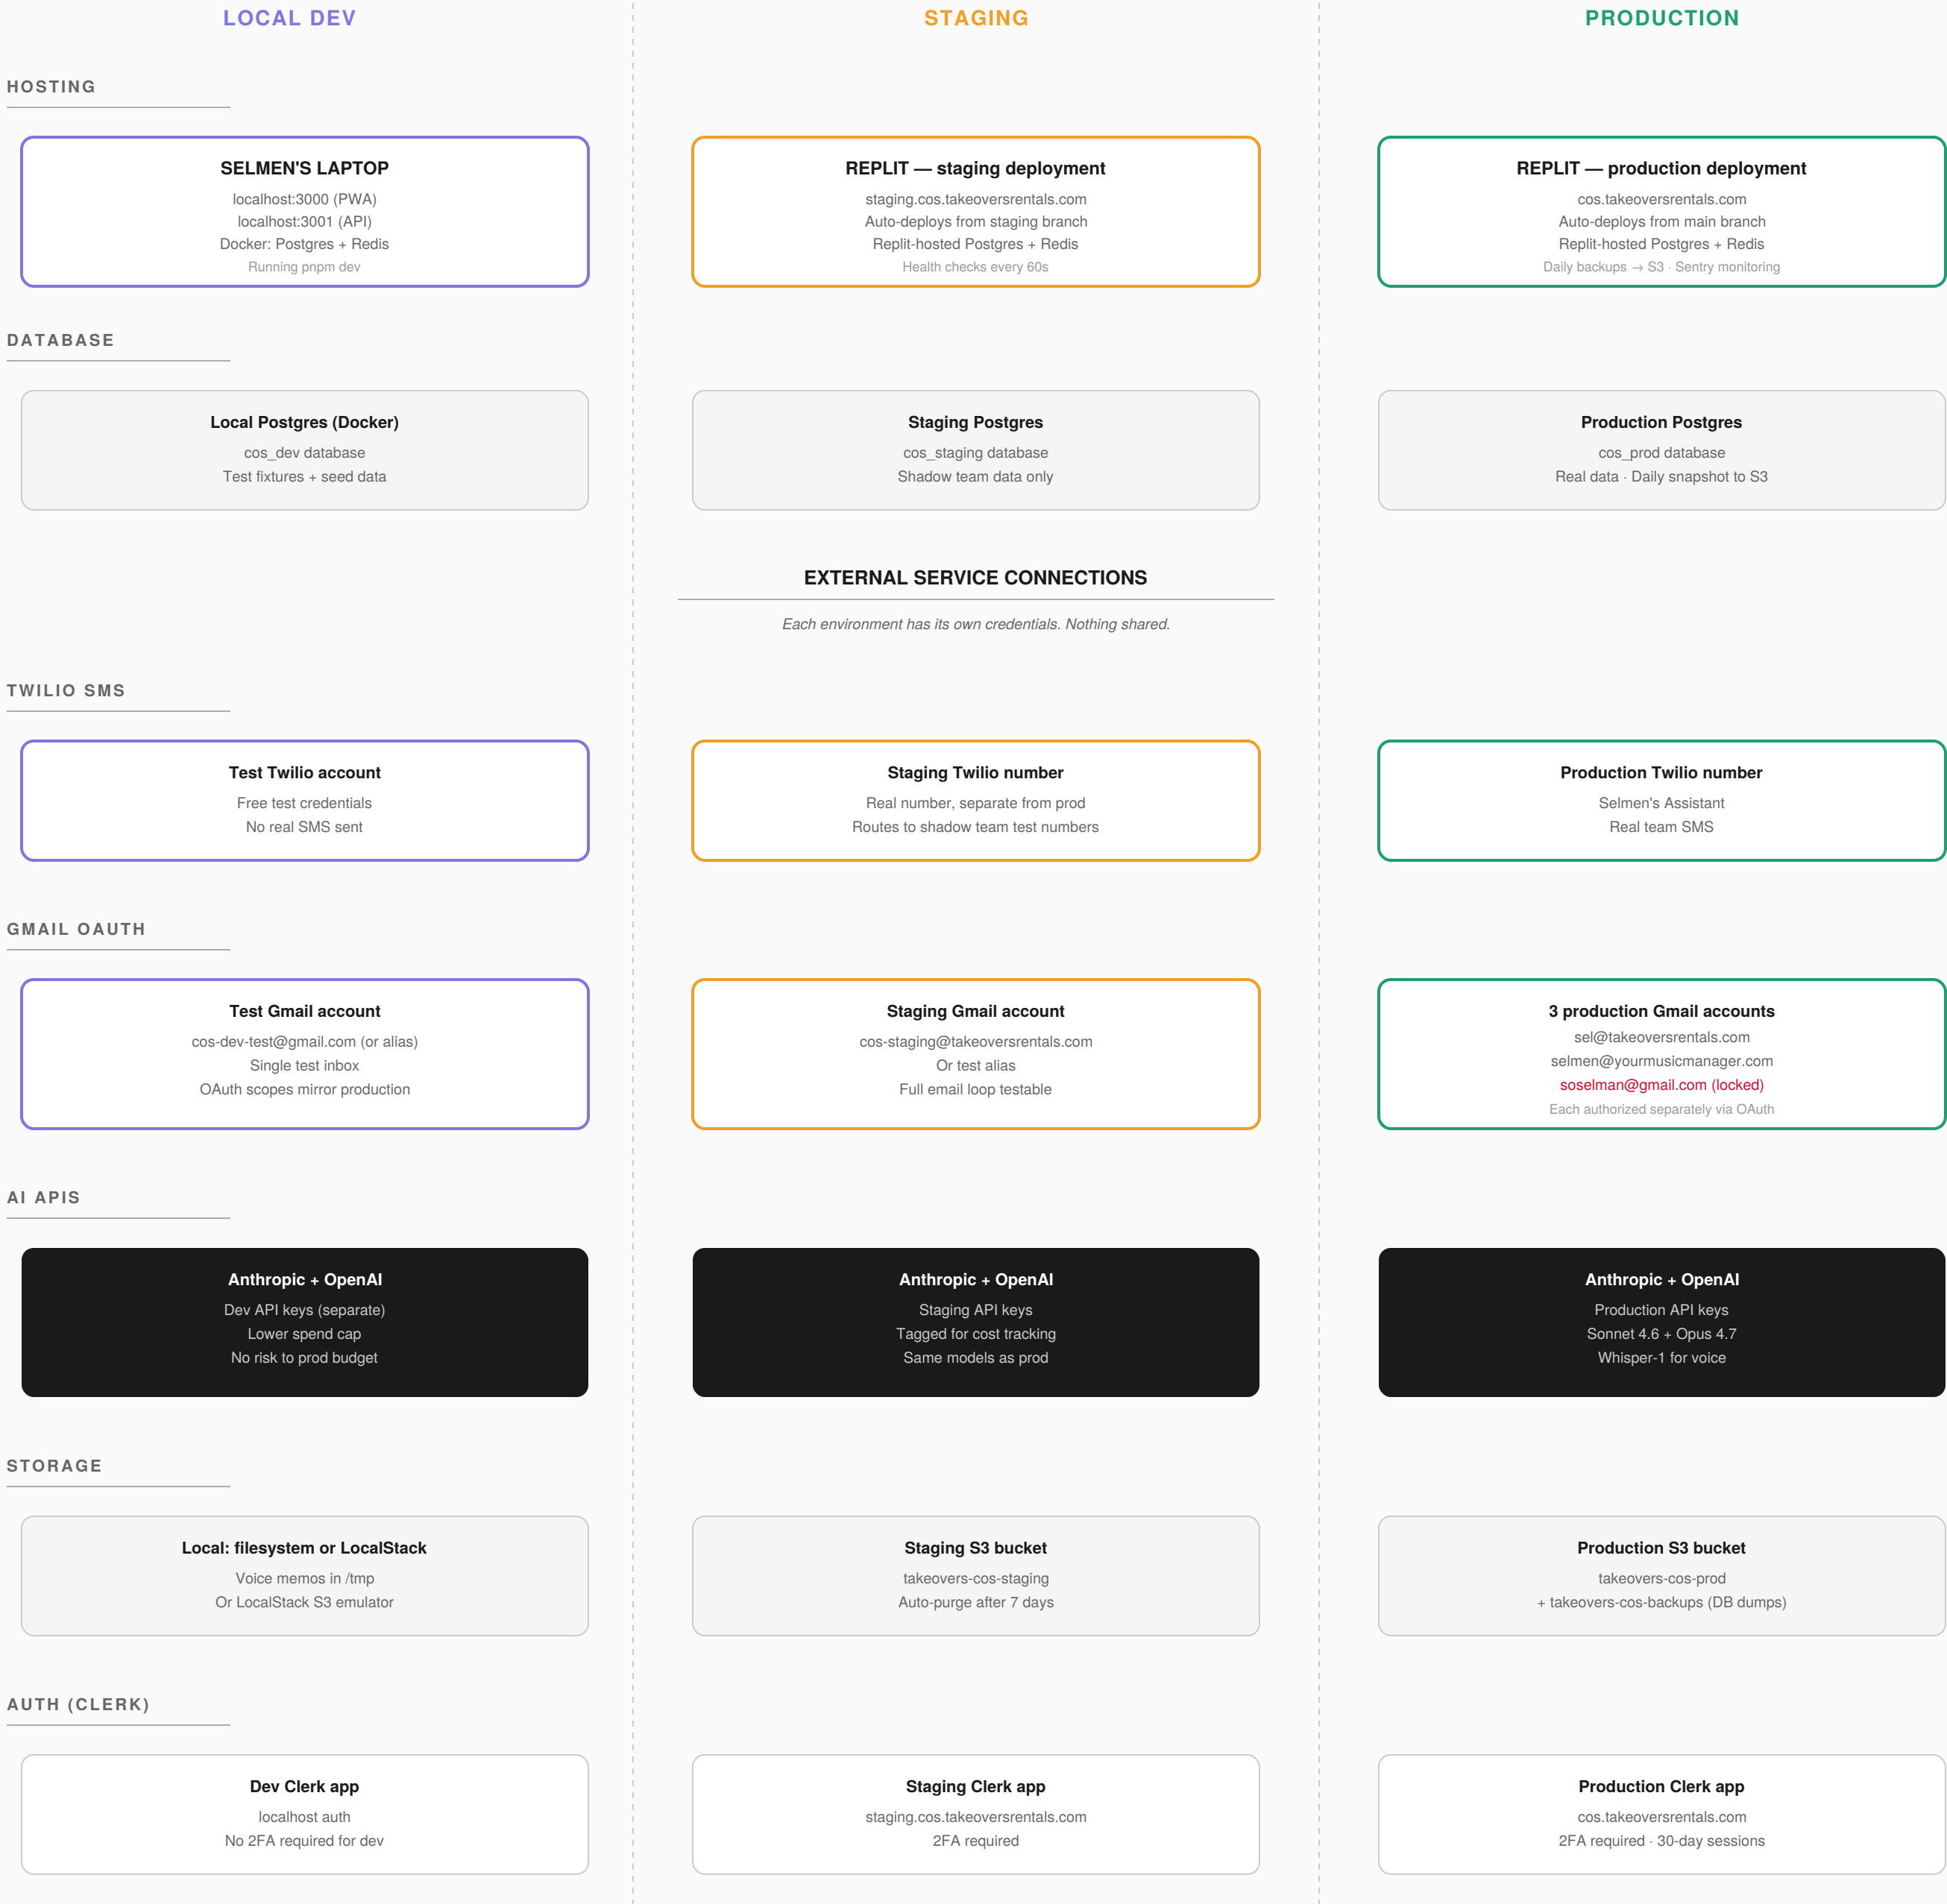

Document 13a · How the agent decides what to do with a captured input

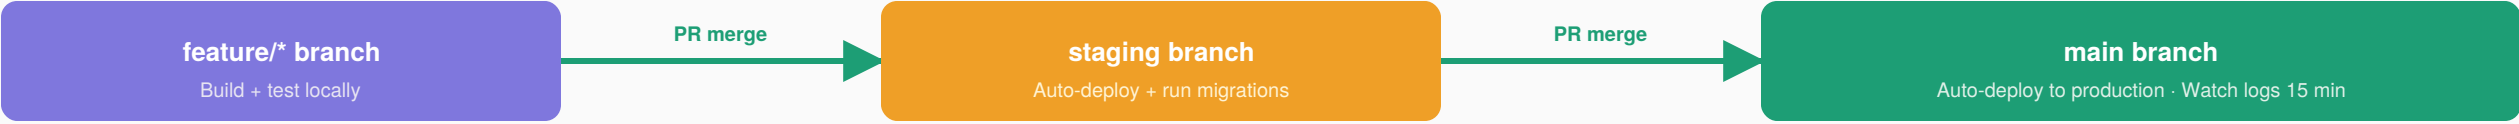

Every state transition logged to `agent_actions_log`. Override patterns feed weekly Insights run.
See Document 12 for end-to-end data flow examples · Document 13b (next page) for deployment topology

Takeovers Chief of Staff — Deployment Topology

Document 13b · Three-environment deployment with full external service mapping

DEPLOYMENT FLOW

↓ Migrations run automatically on every deploy ↓

DEPLOYMENT PRINCIPLES

- Independence

Each environment has its own credentials. A bug in staging cannot affect production.
- Rollback safety

Feature flags default OFF. New capability deploys disabled, flipped on after verification.
- Migration discipline

Forward-only schema changes. Two-phase destructive changes. Backup before risk deployment.
- Backup posture

Daily DB to S3. Quarterly fire-drill restore. Backup paranoia is non-negotiable.

See Document 03 for full setup steps · Documents 04-10 for phase-by-phase build
